# Control of Substances Hazardous to Health (COSHH) Assessment

**Faculty/Department:** Science and Engineering  
**School/Section:** School of Engineering / Civil and Coastal Engineering  
**Assessment No.:**  
**Assessor:** Tony Tapp

**Description of procedure or experiment (include how long and how often this is carried out and the quantity of substance used):** BASF MasterPolyheed 410, a mid range plasticizer admixture based on polycarboxylate ether, used in concrete mixes to increase workability or to lower the water/cement ratio while maintaining workability. Added to a mix at a rate of 0.5 to 2% by weight of cement by incorporating into the final 40% of the mixing water. Product is supplied in 1 litre plastic screw-top container.

**Identify the persons at risk:**  
- [ ] Staff  
- [ ] Contractors  
- [ ] Public/students

**Name the substance involved in the process, the supplier (if known) and the information source:** BASF MasterPolyheed 410, supplied as a light brown coloured alkali liquid which is soluble in water. Supplier: BASF plc, PO Box 4, Earl Road, Cheadle, Cheshire, SK8 6QG, 0161 485 6222, product-safety-north@basf.com; Emergency: 0049 180 2273 112

## Classification (state the category of danger, tick all that apply)

- [ ] Very Toxic
- [ ] Toxic
- [ ] Corrosive
- [ ] Harmful
- [x] Irritant
- [ ] Sensitiser
- [ ] Explosive
- [ ] Oxidising
- [ ] Carcinogenic
- [ ] Highly Flammable
- [ ] Gas under pressure
- [ ] Flammable
- [ ] Environment

## Hazard Type (tick all that apply)

- [ ] Gas
- [ ] Vapour
- [x] Mist
- [ ] Fume
- [ ] Dust
- [x] Liquid
- [ ] Solid
- [ ] Other

## Route of Exposure (tick all that apply)

- [x] Inhalation
- [x] Skin
- [x] Eyes
- [x] Ingestion
- [ ] Other

**Workplace Exposure Limits (WELs) please indicate n/a where not applicable**

**Long-term exposure level (8hr TWA):** No limits given.

**Short-term exposure level (15 mins):** No limits given.

**State the Risks to Health from Identified Hazards (include Risk Phrases):**

R36/38 - Irritating to eyes and skin; S37/39 - Wear suitable gloves and eyewear protection.
Control Measures: (for example extraction, ventilation, training, supervision). Include special measures for vulnerable groups, such as disabled people and pregnant workers. Take account of those substances that are produced from activities undertaken by another employer’s employees. (include Safety Phrases)

Wear PPE. Avoid aerosol generation.

<table>

First Aid Measures

In all cases seek medical attention if symptoms persist. Inhalation: Remove casualty to fresh air. Skin contact: Wipe off immediately; wash with soap and plenty of warm water. Seek medical attention if irritation develops. Eye contact: Flush with water for at least 15 minutes. Seek immediate medical attention. Ingestion: Rinse mouth, then drink plenty of water; seek medical attention.

Spillage/Uncontrolled Release Procedures

Do not breathe vapours. Wear PPE. Avoid discharge into watercourses or drains. Contain spill and absorb spill with an inert absorbent or cloth, place collected product into suitable container for disposal.

Storage

Store at room temperature in tightly closed original container.

Disposal of Substances & Contaminated Items

## 4. Emergency and First Aid Procedures.

### Inhalation:

No specific treatment is necessary as this material is not likely to be inhaled, unless the material is in dust form: see infra 8.

Wash with soap and running water.

### Skin Contact:

Immediately flush with plenty of water.
Get medical attention if problem develops.

### Eye contact:

### Ingestion:

Ingestion of this material is unlikely.
If it does occur, get medical attention.

</thead>
<tbody>
<tr>
<td>( P_{\text{Total}} ) in (kN)</td>
<td>45.30 (kN)</td>
</tr>
</tbody>
</table>

\[ a = 0.35 \]

\[ E = 210000000 \]

\[ I = 0.00005625 \]

\[ \delta_{\text{Uncracked(Max)}} = 0.25 \text{ (mm)} \]
10.11 BFRP Ultimate Load Calculations

\[ d = h - c_{nom} - \phi_{link} - \phi_{bar}/2 \]

- \( L = 1.5 \) (m)
- \( h = 200 \) (mm)
- \( c_{nom} = 25 \) (mm)
- \( \phi = 8 \) (mm)

**T = Area of Steel Reinforcement x Allowable Stress** = 101 (kN)

- Area of Reinforcement = 101
- Allowable Stress = 1000
- Materials Factor = 1

**FOR EQUILIBRIUM COMPRESION MUST BE EQUAL TENSION** = 101 (kN)

\[ C = 0.8 \times X \times (\text{materials factor} \times f_{ck} / \text{materials factor}) \rightarrow X = (C \times 10^3) / (f_{ck} \times b) \]

\[ X = 30.05952 \] (mm)

- Statistical Factor = 1
- \( f_{ck} = 28 \)
- Section Width (b) = 150

\[ \lambda = 0.8 \]
\[ X < 0.45d \]

\[ 0.45d = 73.35 \]

**BM Capacity** = \( T(d - 0.8X/2) \)

**BM Capacity** = 15.25 (kNm)

\[ \delta_{\text{max}} = 2.8 \text{ (mm)} \]

\[ a(m) = 0.35 \]

\[ E = 50000000 \]

\[ I = 0.00005625 \]

**P in (kN)** = 43.57 (kN)

**\( P_{\text{total}} \) in (kN)** = 87.13 (kN)

**BM = Pa**
Bending Moment and Shear Force Calculation (Beam B4)

**PROJECT:** Dissertation  
**ELEMENT:** BFRP BEM B4  
**SHEET NO:**  
**DESIGNED BY:** E.R.  
**DATE:** 05/04/2017  

**CALCULATIONS**

- BFRP REBAR REINFORCED BERN B4

\[
\begin{align*}
\text{BM} &= 40.275 \times 0.251 \\
&= 10.107 \text{ kNm}^2
\end{align*}
\]

**OUTPUT**

\[
\begin{align*}
\text{BM} &= 40.275 \times 0.251 \\
&= 10.107 \text{ kNm}^2
\end{align*}
\]
**Calculations**

**Bending Check**

\[ K = \frac{M}{bd^2 f_{ck}} \]

\[ = \frac{10 \times 10^9 \times 10^6}{150 \times 163^2 \times 28.4} \]

\[ = 0.0906 \]

\[ L = \frac{d}{2} \left[ 1 + \sqrt{1 - 3.53 K^2} \right] \leq 0.95 d \]

\[ = K \leq K' \]

\[ K' = 0.168 \]

\[ L = \frac{163}{2} \left[ 1 + \sqrt{1 - 3.53(0.0906)^2} \right] \leq 0.95 (163) \]

\[ = 148.72 \leq 154.85 \]

\[ \checkmark \]

**Output**

\[ f_y = \frac{f_y d}{f_y d^2} \]

\[ \frac{f_y d}{f_y d^2} = \frac{1000}{1} \]

\[ f_y m = 1.0 = \text{same material factor if not established.} \]
$f_{yk} = 1000$

$\frac{f_y}{f_{yd}} = \frac{1000}{1} = 1000 \text{ N/mm}^2$

$A_s = \frac{10 \times 10^6}{1000 \times 148.92} = 68 \text{ mm}^2 < A_{s\text{prov.} (BFRP)} = 101 \text{ mm}^2$

Calculation above signifies that at point of failure BFRP had more than enough capacity to withstand the tension.

Thus, this suggests that beam failure did not occur in bending. Stress check is required...
**CALCULATIONS**

**SHEAR CHECK**

\[
\sigma_{\text{ed}} = \frac{V_{\text{ed}}}{b_{w} \cdot t}
\]

\[
= \frac{40.275 \times 10^3}{150 \cdot 148.72}
\]

\[
= 1.14 \text{ N/mm}^2
\]

\[
N_{\text{ho}} = \frac{\sigma_{\text{ed}} \cdot b_{w} \cdot S}{f_{u,wd} \cdot \cot \theta}
\]

\[
= \frac{1.14 \times 120 \times 150}{435 \cdot 2.5}
\]

\[
= 30 \text{ mm}^2
\]

*3 H'8 links provide: 151 mm\(^2\) > 30 mm\(^2\)*

The signifucant fact at the point of failure sheve links had more than enough capacity to withstand shevel force applied.

\[ M_{cr} = f_{cm}^* (b_d h_t / 8) \]

- \( f_{cm} = 2.6 \text{ N/mm}^2 \) or \( \text{ Mpa} \)
- \( b = 150 \text{ mm} \)
- \( h_t = 40000 \text{ mm}^2 \)

\[ M_{cr} = 2.8 \text{ kNm} \]

\[ \epsilon = 1 - \beta (M_{cr}/M)^2 \]

- \( \beta = 1 \) (assumed for a single short-term load). Also for sustained loads or cyclic loading is 0.5

\[ \epsilon = 0.966 \]

\[ (1/r)_c = (1/r)_c (1 - \epsilon) (1/r)_{uc} \]

- \( (1/r)_{uc} = \frac{M}{E f_{c,e,eff} l_{uc}} \)
- \( l_{uc} = b d^3 / 12 \)
- \( = 150 \)
- \( d = 200 \)

\[ l_{uc} = 100000000 \text{ mm}^4 \]

\[ (1/r)_c = 1.77103E-05 \text{ /mm} \]

\[ l/r = 1.47E-04 \]
The deflection of the beam can be calculated from the total curvature using elastic bending theory which for small deflections is based on the expression:

\[ M = \frac{EId^2y}{dx^2} \]

\[ EId\frac{dy}{dx} = Mx + A \]

\( A \) – constant of integration

\[ A + x = \frac{Ldy}{2dx} = 0 \]

\[ \therefore A = \frac{-ML}{2} \]

\[ -Ely = \frac{Mx^2}{2} + Ax + B \]

\( B \) – constant of integration

\[ -Ely = \frac{Mx^2}{2} - \frac{MLx}{2} + B \]

when \( x = 0 \) and \( y = 0 \)

\( B = 0 \)

\[ y = \frac{M}{EI} \left( \frac{x^2}{2} - \frac{Lx}{2} \right) \]

Maximum Deflection Occurs at Midspan When \( x = \frac{L}{2} \)

\[ y = -\frac{M}{EI} \left( \frac{L^2}{8} \right) \]

substitute \( -\frac{M}{EI} \) with \( \frac{1}{r} \) (refer to ciii)

\[ y = \frac{1}{r} \left( \frac{L^2}{8} \right) \]

\[ y = 1.47 \times 10^{-4} \left( \frac{1300^2}{8} \right) \]

\[ y = 31.0 \text{ mm} \]
10.15 Transverse Steel Beam Deflection

Analysis undertaken using Two-Frame Structural Analysis software.
(Deflection Units in mm; External Load in kN)
**Tensile Strength Test Modulus of Elasticity**

**Graph 1 – Experimental Steel and BFRP Rebar Modulus of Elasticity.**

Basalt Rebar Modulus of Elasticity:

\[
E = \frac{\text{Stress}}{\text{Strain}} = \frac{400}{0.0081} = 49383 \text{ MPa} = 49.4 \text{ kN/mm}^2
\]

Steel Rebar Steel Modulus of Elasticity:

\[
E = \frac{\text{Stress}}{\text{Strain}} = \frac{290}{0.0014} = 207143 \text{ MPa} = 207.1 \text{ kN/mm}^2
\]
