FIGURES AND PLATES

LIST OF FIGURES

(In Volume 2)

<u>Figure</u>	<u>Title</u>	<u>Page</u>
1.1	Hydrological pathway from the atmosphere to the stream showing transfers monitored by this investigation.	1
1.2	The three levels of investigation in this study a. Point samples and hillslope levels b. Catchment level	2
1.3	Translatory flow on a hillslope	3
2.1	Location and topography of the Narrator catchment	4
2.2	Temporal variation in a. air temperature b. precipitation	5
2.3	Valley cross profiles in the Narrator catchment	6
2.4	Distribution of soil types in the Narrator catchment	7
2.5	Cation exchange capacity, per cent base saturation and exchangeable cations of the a. Moretonhampstead series b. Hexworthy series	8 9
2.6	Distribution of the vegetation communities in the Narrator catchment	10
2.7	Drainage net in the Narrator catchment (after Murgatroyd, 1980)	11
2.8	Typical storm hydrograph in the Narrator Brook	12
2.9	Temporal variation in discharge in the Narrator catchment	13
3.1	Research design and the various levels of investigation involved	14
3.2	Location of detailed study area in Narrator catchment	15
3.3	Three slope profiles showing the position of the interception pits, their soil profiles and the location of nearby springs.	16
3.4	Instrumentation in the Narrator catchment	17

<u>Figure</u>	<u>Title</u>	<u>Page</u>
3.5	Process monitoring diagram (after Foster, 1977)	18
3.6	Period of operation of bulk precipitation collectors	19
3.7	Arrangement of throughfall and stemflow collectors in sitka spruce forest	20
3.8	Period of operation of throughfall and stemflow collectors beneath sitka spruce	19
3.9	Period of operation of throughfall and stemflow collectors beneath bracken	19
3.10	Interflow gutter system (after Whipkey, 1965)	21
3.11a	Pan lysimeter (after Parizek and Lane, 1970)	21
b	Interflow trough (after Arnett, 1974)	
c	Gerlach trough (after Gerlach, 1967; Schick, 1967)	
3.12	Trench system (after Dunne and Black, 1970)	22
3.13	Tile drain installation incorporating Gerlach trough (after F.D.E.U., 1976)	22
3.14	Variations in the pattern of subsurface flow due to the presence of a pit (after Atkinson, 1978)	23
a.	unsaturated conditions	
b.	saturated conditions	
3.15	Period of operation of litterflow and interflow collectors	24
3.16	Period of operation of porous cup water samplers	24
3.17	Period of monitoring the springs	25
3.18	Stage discharge relationships for the two gauging stations in the Narrator Brook	26
a.	Station 2	
b.	Headweir	
3.19	Period of monitoring Yellowmead Brook (weekly samples) and Narrator Brook (daily samples)	25
3.20	Period of operation of point sample collectors along the hydrological pathway from the atmosphere to the stream	27
4.1	Mean weighted solute concentration in bulk precipitation	28
4.2	Temporal variation in bulk precipitation chemistry	29

<u>Figure</u>	<u>Title</u>	<u>Page</u>
4.3	Principal components analysis of rainfall chemical data	31
4.4	Temporal change in component I scores of bulk precipitation	32
4.5	Mean weighted solute concentrations in sitka spruce throughfall	33
4.6	Temporal variation in throughfall chemistry beneath sitka spruce	34
4.7	Principal components analysis of sitka throughfall chemical data	36
4.8	Mean weighted solute concentration in throughfall and stemflow beneath bracken (6/6/77 to 31/10/77)	38
4.9	Temporal variation in throughfall and stemflow chemistry beneath bracken	39
4.10	Principal components analysis of bracken throughfall chemical data	41
4.11	Annual mean weighted solute concentrations in <ul style="list-style-type: none"> a. bulk precipitation b. sitka spruce throughfall and c. bracken throughfall and stemflow 	43
5.1	Saturated overland flow developed where soil is saturated to the surface due to an impermeable iron pan	44
5.2	Volumes of litterflow recorded for one year at the twelve monitoring sites in the Narrator catchment	45
5.3	Conductivity levels in litterflow and interflow	46
5.4	Sodium concentrations in litterflow and interflow	47
5.5	Chloride concentrations in litterflow and interflow	48
5.6	Potassium concentrations in litterflow and interflow	49
5.7	Calcium concentrations in litterflow and interflow	50
5.8	Magnesium concentrations in litterflow and interflow	51
5.9	Silica concentrations in litterflow and interflow	52
5.10	Species of vegetation and silica concentrations in litterflow in the grassland	53
5.11	Temporal variation in litterflow solute concentrations in the grassland (G4)	54

<u>Figure</u>	<u>Title</u>	<u>Page</u>
5.12	Temporal variation in litterflow solute concentrations in the bracken (B3)	56
5.13	Temporal variation in litterflow solute concentrations in the forest (F5)	58
5.14	Temporal variation in conductivity in forest litterflow (F5) in the Narrator catchment	60
5.15	Temporal variation in conductivity in forest litterflow after McColl (1973)	60
5.16	Principal components analysis of litterflow chemical data	61
6.1	Interflow above an iron pan (pathway 1)	63
6.2	Interflow above a fragipan (pathway 2)	64
6.3	Saturation upwards above a fragipan (pathway 3)	65
6.4	Saturation within an impeding layer (pathway4)	66
6.5	Volumes of interflow recorded for one year at twelve monitoring sites in the Narrator catchment	67
6.6	Hydrological model for a Dartmoor hillslope	68
6.7	Conductivity levels in litterflow and interflow	69
6.8	Sodium concentrations in litterflow and interflow	70
6.9	Chloride concentrations in litterflow and interflow	71
6.10	Potassium concentrations in litterflow and interflow	72
6.11	Calcium concentrations in litterflow and interflow	73
6.12	Magnesium concentrations in litterflow and interflow	74
6.13	Silica concentrations in litterflow and interflow	75
6.14	Temporal variation in grassland interflow chemistry (G2, 100 cm depth) during weeks of flow	76
6.15	Temporal variation in grassland interflow chemistry (G4, 92 cm depth)	77
6.16	Temporal variation in bracken interflow chemistry (B1, 85 cm depth)	79
6.17	Temporal variation in forest interflow chemistry (F4, 53 cm depth)	81
6.18	Principal components analysis of interflow chemical data	83

<u>Figure</u>	<u>Title</u>	<u>Page</u>
7.1	Location of springs monitored in the Narrator catchment	85
7.2	Discharge of springs 4, 18 and 20	86
7.3	Soil and ground water temperature variability data in the Narrator catchment	87
7.4	Distribution of the standard deviation of spring temperatures for the springs in the Narrator catchment (N = 18)	88
7.5	Conductivity levels in springs	89
7.6	Sodium concentrations in springs	90
7.7	Potassium concentrations in springs	91
7.8	Calcium concentrations in springs	92
7.9	Magnesium concentrations in springs	93
7.10	Silica concentrations in springs	94
7.11	Chloride concentrations in springs	95
7.12	Permeability differences in the regolith and spring emergence	96
7.13	Temporal variation in solute chemistry of spring 13	97
7.14	Temporal variation in solute chemistry of spring 14	99
7.15	Principal components analysis of spring chemical data	101
7.16	Principal components analysis of spring 14 chemical data	102
7.17	Principal components analysis of spring chemical data on 19th December, 1977	104
8.1	Flow duration curve for the Narrator Brook	107
8.2	Selected stream hydrographs for the Narrator Brook	108
8.3	Master recession curve for the Narrator Brook (after Sims, 1976)	113
8.4	Classification of streamwater in the Narrator catchment	114
8.5	Downstream variations in solute concentrations in the Narrator catchment	115
8.6	Downstream variation in conductivity (after Murgatroyd, 1980)	116
8.7	Temporal variation in stream chemistry	117

<u>Figure</u>	<u>Title</u>	<u>Page</u>
8.8	Chemographs and their associated storm hydrographs	119
8.9	Hysterisis loops for sodium, silica and chloride	122
8.10	Solute rating curves for the Narrator catchment	123
8.11	Principal components analysis of stream chemical data for Headweir	125
9.1	Thin section of Moretonhampstead soil (G4, 33 cm depth)	127
9.2	Thin section of Moretonhampstead soil (G4, 62 cm depth)	127
9.3	Stability diagrams for grassland interflow (G4, 92 cm depth), spring 14, stream and reservoir	128
9.4	Stability diagrams for bracken interflow (B1, 85 cm depth), spring 14, stream and reservoir	129
9.5	Stability diagrams for forest interflow (F4, 53 cm and 76 cm depth), springs 17, 18 and 19, stream and reservoir.	130
<u>Plates</u>		
2.1	Narrator catchment and study area looking S.W. from Combshead Tor	131
2.2	Profile of the Moretonhampstead series	132
2.3	Profile of the Hexworthy series	132
3.1	Throughfall and stemflow collector beneath bracken	133
3.2a	Whipkey type gutter system: insertion of polythene in face of soil profile	134
3.2b	Whipkey type gutter system: complete installation	134
9.1	Thin section of Moretonhampstead soil (G4, 33 cm depth)	135
9.2	Thin section of Moretonhampstead soil (G4, 62 cm depth)	136
