Dr. Timothy Lynch

- Teaching experience (Tertiary, Primary & Secondary)

- Education systems

- MEd-Physical Education & Health (Deakin University)
Doctor of Education (2002-2006)

An evaluation of school responses to the introduction of the Queensland Health and Physical Education (HPE) syllabus and policy documents (1999) in three Brisbane Catholic Education Primary Schools.
Research Problem

- How is HPE taught in these schools?

  Why?

- Equality
  - HPE KLA
  - Role it plays within each Brisbane Catholic Education (BCE) school
Context of the research

- HPE history of:
  - discourses - military, scientific, health & sporting
  - ideologies - sexism, elitism, healthism, individualism, meritocratism & mesomorphism

- ‘Crisis’ 1980s and 1990s
  - social and cultural forces
  - Qld (Walmsley, 1998)

- Senate Inquiry 1992
  (supported in-house discussions)
Context of the research

- 1991, Australian Education Council (AEC) recommended- statements and profiles (OBE)
- Based on key principles
  - Diversity
  - Social Justice
  - Support Environments
Context of the research

- 1996 BCE appointed HPE Co-ordinating Education Officer

- Constructed intersystemically (EQ, CEC, AIS)

- HPE/ Science - first OBE syllabuses

- 3 strands (equal weighting) - 1.5 hrs per week
Context of the research

- Adopted socio-cultural approach
  - recognises that students are influenced by physical, social, cultural, political & economic environmental forces
  - underpinned by social justice principles
  - HPE teachers task is to ‘make’ the healthy citizen

- Critical, socially just pedagogy
  - understanding new kids & new times
Context of the research

- Implementation responsibility of each system

- BCE implementation 1999-2001
  - Significant status (new syllabus & EB3)
  - 120 minutes release time per week

- Whole School approach
  - adjust syllabus to BCE school context
Context of the research

- BCE Implementation complete?
  - Since 2001 - no direct support (HPE officers, PD)

- Webster (2001) NSW primary schools
  - HPE taught by “generalist” teachers

- Pedagogy?

- Reasons for the decline
  - Evidence presented to inquiry
Context of research

- **Recent literature**
  - HPE is failing

- **Programs**
  - *Building a Healthy Active Australia, Get Active*
  - *Aim-* bring about cultural change (Howard, 2004)

- **Change**
  - technological advancements, social and environmental pressures

- Raises question over the implementation of the socio-cultural HPE syllabus?
Context of the research

- Sparkes (1991)
  - superficial change

- Success
  - determined by teachers & students in classrooms

- Teachers and students FOCUS
  - Has change from crisis occurred at a deep level?
Research Problem

How thorough and systemically developed is the implementation of the new HPE syllabus in BCE primary schools?
The Research Purpose

To explore the implementation of the new Queensland HPE syllabus (1999) in three BCE primary schools of varying enrolment numbers.
Research Questions

How is HPE taught?

1. How are teachers implementing the HPE curriculum documents (1999, OBE)?
2. What readily accessible resources do schools have to assist with the implementation of Health and Physical Education?
3. What are teachers’ perceptions of the HPE Key Learning Area?
4. What are children’s perceptions of the HPE Key Learning Area?
Research Question

- What implementation strategies are required to optimize HPE practices in BCE schools?
Significance of the Research

- Assess BCE needs and developments
- Voice teachers’ and students’ perspectives
- Enable the final stages of implementation
- Contextualise major HPE issues
- Contribute towards the Strategic Renewal Framework
- Timing is significant - literature on HPE syllabus responses
- Lack of study for HPE in BCE
Review of Literature

- Conceptual Framework
Evaluating school responses to the 1999 Queensland Health and Physical Education documents in three primary schools of varying enrolment numbers, within Brisbane Catholic Education (BCE)

The importance of the HPE KLA in a Catholic Primary School

Beginning in the early years

Catholic Context

Quality HPE

Improved performances in other learning areas

Lifelong participation

Health benefits

HPE Syllabus as a policy for implementation

Reasons for development

HPE syllabus as policy

Policy construction process

Policy implementation within BCE

Curriculum Change

Measuring the implementation degree of development

Focus areas of HPE school curriculum
Health benefits

- Physical fitness & activity
  - minimises the risk of disease
  - maximises wellness

- Mental Health and social benefits

- Academic
  - Improved Performance
Obesity epidemic

¼ Australian children overweight or obese

Building a Healthy Active Australia
-$116 million 2005-2008

Get Active (State)
Healthism Gard & Wright (2005)

- Obesity discourses
  - anxieties about the body

- Physical Activity
  - motivation decrease

- Lifelong physical activity
  - Impact
Optimum time

- Pre-school and early years
  - early detection of motor problems, early intervention programs, confident

- Inadequate skills
  - limits participation in lifelong physical activity
Quality HPE

- Specialist HPE teacher
  (quality instruction/ eclectic pedagogies)
  - needs to be fun (want to engage)
  - Inclusive lessons (diverse abilities & interests)

- Open ended tasks
  - individual challenges
  - modified team sports

- Benefits
  - unskilled & obese youngsters the most
Curriculum Change

- Complex process

- Policy construction, implementation & evaluation

- Partnerships working horizontally
  - collaborative relationships between administrators, curriculum developers, researchers, teachers & parents
HPE curriculum to be investigated

- Senate Inquiry
  - problem issues caused crisis (resources, teachers & time)
- Socio-cultural approach
- BCE implementation challenges
  - social justice, inclusive curriculum, resources, quality experiences
- Teaching time for each strand
- HPS model ideal framework for evaluation of all 3 strands
HPS model

- Scope of HPE considered WHOLE
- Enhancing the emotional, social, physical & moral well being of community members

Diagram:
- School organisation, ethos and environment
- Curriculum, teaching and learning
- Partnerships and services
Research Design

- Theoretical Framework
  - Epistemology
  - Theoretical Perspective

Diagram:
- Constructionism
- Interpretivism
  - Symbolic Interactionism (lens)
Research Methodology

- Evaluative and multiple case study

- 3 BCE primary schools
  - small scale deep understanding
  - varying enrolment numbers, geographic location and socio-economic status
Participants & Data Gathering Strategies

Data Collection Methods
- Interviews; Semi-structured
- Interviews; Focus group
- Reflective journal
- Observation
- Document Analysis
# Research Participants

Analysis of data

- Narrative/ Descriptive report
- Analysis through Wellington’s 6 staged ‘Constant Comparative Method’
- Analysis is iterative
## Process of data analysis

<table>
<thead>
<tr>
<th>Stage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage 1</td>
<td>Analysis of each case study/ school using Wellington’s table of analysis.</td>
</tr>
<tr>
<td>Stage 2</td>
<td>Narrative/Descriptive report given for each case study.</td>
</tr>
<tr>
<td>Stage 3</td>
<td>Cross case analysis again using Wellington’s table of analysis.</td>
</tr>
<tr>
<td>Stage 4</td>
<td>Narrative/Descriptive report given for cross case study analysis.</td>
</tr>
</tbody>
</table>
General stages in making sense of qualitative data (Wellington, 2000).

- Immersion

- Reflecting, standing back

- Analysing:
  - dividing up, taking apart
  - selecting and filtering
  - classifying, categorizing

- Synthesizing, re combining

- Relating to other work, locating

- Reflecting back
  (Returning for more data?)

- Presenting, disseminating, sharing
Summary-Case Study One
(less than 200 students)

- All experienced teachers
- Only one had PD in HPE syllabus (no specialist training)
- Responsible for all 3 strands
- PA strand given most time
- No Whole School Program
- Concepts and skills were few and often repeated
- No PMP in early years
- All teacher participants agreed there were connections between HPE & RE curriculum
- Healthy living promoted through organisations visiting school; Life Ed van, Jump Rope For Heart, Dance Fever and sun safety-no hat no play
Summary-Case Study Two
(200-400 students)

- Well designed and implemented program (WSP)
- Experienced HPE specialist provided PA strand (at least 40 mins per week)
- PA covered were wide in scope & variety
- Lack of space was compensated by partnerships
- Classroom teachers responsible for Health & Personal Development strands (no WSP)
- Varying degrees of HPE PD
- All teacher participants agreed there were connections between HPE & RE curriculum
- Healthy living promoted by healthy food at tuckshop, no hat no play sun safety rule, Walk to School Program (QUT), Auskick, lunch time touch football & netball competitions
Summary-Case Study Three (over 400 students)

- Full time HPE specialist (one day release from teaching for sports coordination)
- Ample space, facilities, equipment & Health & PD resources
- Teacher participants had varying degrees of experience & HPE PD
- Teachers, including HPE specialist (who began after 2001) lacked knowledge & confidence implementing HPE (no PD)
- HPE specialists claimed qualifications were not evidenced within HPE practice or shared knowledge
- Early years teacher graduated recently from University without studying a HPE unit
Summary-Case Study Three (over 400 students) continued

- All teacher participants agreed there were connections between HPE & RE curriculum
- Who was responsible for strands?
- Specialist claimed to do a PMP – no students or teachers could verify this
- No WSP
- Students did not appear to be as interested as the teachers perceived them to be
- Students believed HPE reduced stress
- Healthy living promoted through visits from organisations: Life Ed van, Dance Fever, Jump Rope For Heart and sun safety rule no hat no play
- Teachers listed all 3 strands as areas requiring attention
Summary of Cross Case Analysis

The degree of shift towards an inclusive, socially just curriculum as adopted by syllabus related to:
- Students’ interest
- Teacher participants’ experience, knowledge & confidence within HPE
- School facilities, equipment & space
- School partnerships & services within community
- HPE specialist teacher?
- WSP implementation?
### Summary of Cross-Case Data Analysis Findings

</table>
Discussion

- Completion of syllabus implementation (2001)
  - not one of the case study schools working from a HPE WSP
- Case study 2 school PA WSP
- Communication
  - important for implementation
- Younger teachers
  - no HPE PD since 2001, not all students required to study HPE at University
- HPE specialists do not require qualifications or experience
- Quality lessons are not always implemented
  – negative influences on students’ perception of PA
Discussion

- PA strand
  - allocated sufficient time
- Some schools rely on sporadic visitations from sporting organizations to implement the syllabus (often at additional cost to students)
- Case Study One school (no specialist teacher) was lacking resources and advocacy
- Case Study Two school overcame lack of space through developing partnerships and services within their community
- HPE specialist teacher release time for sports coordination was not equal
Conclusion

Case Study schools appeared vulnerable to many of the factors that led to the decline in HPE revealed by the Senate Inquiry (Commonwealth of Australia, 1992; Swabey, et al., 1998)
BCE Implementation Challenges (1998)

- Challenges have not been achieved within 3 Case Study schools
  - social justice, inclusive curriculum, resources, quality experiences
Conclusions

- Unequal allocation of teaching resources
  - equipment, facilities, HPE specialist teachers and HPE specialist teacher release time

- No HPE Curriculum Officers within BCE
  - responsibility has been devolved to school principal

- Appears syllabus implementation process support ceased prematurely
  - no WSP
  - teachers lacked understandings of practical ways to implement the social justice underpinnings of syllabus
  - Principals unaware of necessity of employing qualified HPE specialist teachers
Conclusions

- Obstacle – teachers needed to grasp OBE before embracing the socio-cultural approach
- Data generated suggests
  - not a matter of educating specialist teachers in new critical pedagogies but rather educating inexperienced HPE teachers in all HPE pedagogies and quality teaching practices
- Communication & effort is essential (3 strands) gains more importance in absence of HPE Curriculum Officers
  BCE-Principals-Teachers
Conclusions

- Successful implementation is possible – Case Study Two
- Positive effect on students’ attitudes
- HPE specialist teacher used eclectic pedagogies as required (socio-critical and performance)
- Optimum time for children to learn & refine motor skills is in pre school and early primary – only Case Study Two achieved this
- Present BCE system infrastructure suggests that the Catholic mission can only be achieved through RE (13 Vs 0)
Recommendations

- HPE needs to be embraced as a powerful medium (BCE) providing students with many practical & social experiences living & reflecting on gospel values.
- Governments focus needs to be on further development of the implementation process of the socio-cultural approach within schools and PD of teachers.
- Study limited by its small scale nature, recommended that a large research project be conducted.
